

Hypocalcaemia - Summary Clinical Guideline

Reference No: CG-PHARM/2018/004

For urgent/initial treatment see chart below - see Full Clinical Guideline for further information

* Please note – 22.5mmol calcium gluconate infusions require aseptic manufacture by pharmacy (at RDH only). Whilst this is being prepared, a second bolus may be given if deemed appropriate.

It is vital to investigate and treat underlying cause of hypocalcaemia- initial first line investigations always include Calcium, PTH, Vitamin D, Phosphate, Magnesium and U&E. See chart below for initial interpretation. See full guideline and/or seek advice if cause not derived from this chart
